

5.3.4 Women's application in underrepresented subjects

We at Al Isra University strive to increase acceptance to STEM topics by female. That is achieved by collaborations with community schools within the outreach of the university. One good example was a workshop that was conducted by IU chemistry department an underrepresented subject to teach students from a local community how to make liquid soap. This was aimed at increasing the number of students to science degree. Encourage applications by women in subjects where they are underrepresented. Through university outreach or through collaboration with an NGOs (Hanina Youth Centre) national campaign. A total of 23 female students attended and gained a certificate for their training.
