

6.3 Water usage and care

Isra University acknowledges the importance of water conservation and plans to reduce consumption by recycling water through its on-campus sewage treatment plant. The university currently recycles 37.5% of its wastewater, which is used for irrigating its plants. Each year, the university consumes 16,000 cubic meters (m³) of water. Our water treatment plant supplies 6,000 m³. In 2025, we plan to invest in additional water treatment facilities to further purify water for various uses.

To raise awareness about water consumption,

- The Dean of Student Affairs at Isra University attended an awareness workshop focused on water conservation. This workshop is part of ongoing efforts to promote water awareness, organised in collaboration with the Jordanian Scouts and Guides Association and the German Agency for International Cooperation (GIZ). It took place at the Kempinski Hotel and aimed to raise awareness among citizens of all backgrounds while helping to reduce water waste. Following the workshop, the Student Deanship launched a competition to further this initiative, which will run from March to June 2022.
