

17.4.4 Sustainability Literacy

At IU, we strive to raise awareness on sustainability goals. On an annual basis, we assess sustainability attitudes and understanding using a validated questionnaire across 4 domains. And 14 questions. In the academic year 2024, the overall awareness was 60.4%. Although the number is not promising, it reflects areas where students scored very high, such as Environmental practices and the sustainability concept.

Year	2023	2024
overall Sustainability awareness	59.1%	60.4%

When we asked students what area sustainability concerns, most students (see the Figure below) reported that sustainability is an Environmental issue.
