

7.2 University measures towards affordable and clean energy

7.2.1 Energy-efficient renovation and building

Isra University has been keen since its inception to provide the best services to its students and workers. From this standpoint, the engineering department at the university was established to maintain the sustainability of the university's infrastructure, including buildings, roads, and squares, and to preserve green spaces and the natural environment at the university, in addition to providing wire communication service between the various colleges and departments of the university and with the outside community.

The Engineering Department at IU also provides technical maintenance services in the field of electrical, mechanical, air-conditioning and refrigeration works. There is also a special section in the engineering department concerned with public safety to maintain the safety of students, employees, and workers, as it provides all safety requirements in the university buildings, and it performs periodic maintenance of alarms and fire-fighting devices. ([Message From the Director \(iu.edu.jo\)](mailto:Message From the Director@iu.edu.jo))

There is a series of policies and procedures pertinent to purchasing and supplies (Arrow- a), which also deal with renovation and new buildings that is done through either central or peripheral tenders (Arrow – b). There are also procedures that outline planning process for all needs (Arrow – C).

All engineering work is done through tenders and contracted companies. The selection of companies is based on the clean source of the company and sustainability related matters. Annually contracted companies are evaluated using a specified criteria; quality and sustainability are core to the evaluation process.
